

Cell Culture Engineering X

LIST OF POSTERS AND PRESENTERS

- 1 **Isolation and Characterisation of Hepatocyte Stem Cell Lines**
Alan Dickson, University Of Manchester
- 2 **Production of Gram Quantities of Recombinant Antibodies using Large-Scale Transient Transfection**
Alison Mastrangelo, Abbott Bioresearch Center
- 3 **Metabolic Fingerprinting of Cultured Mammalian Cells**
Alan Dickson, University Of Manchester
- 4 **Analysis of Phenotypic and Genetic Parameters in a Panel of Recombinant Antibody Expressing GS-CHO Cell Lines**
Alison Porter, Lonza Biologics PLC
- 5 **Small Molecule Inducers of Recombinant Protein Expression**
Martin Allen, Amgen, Inc.
- 6 **Intracellular Metabolite Analysis of Distinct CHO Phenotypes**
Dana Andersen, Genentech, Inc.
- 7 **Facs-Based Method for Shortening Cell Line Selection Timelines: Direct Comparison with a Conventional Approach**
Andrew Racher, Lonza Biologics PLC
- 8 **Engineering of CHO Cells for High-Level Inducible Protein Secretion in Protein-Free Suspension Culture**
Bernard Massie, Conseil National De Recherche Canada
- 9 **Quantifying the Effect of Initial PCO₂ Concentrations on NS0 Cell Culture Fermentations**
Thomas Black, Eli Lilly & Company
- 10 **Inducible Packaging Cells for Large-Scale Production of CSIN Lentiviral Vectors in Serum-Free Suspension Culture**
Bernard Massie, Conseil National De Recherche Canada
- 11 **Expression of Phage Display Derived Antibodies Requires Gene Optimization for Removal of Unwanted Splice Sites**
Katja Decker, Novartis Pharma AG
- 12 **The Right Tool for the Job: LongTMR³IGF-I, a Potent Growth Factor for Serum-Free Cell Culture**
Catherine Yandell, GroPep Ltd.

- 13 **Extending the Shelf-Life of Viable Cells for use in Cell-Based Assays**
Chao-Min Liu, Hoffmann-La Roche Inc.
- 14 **Selection of a Suitable NS0 Clone in Support of Production of a Monoclonal Antibody Directed at the IGF-1R**
Michel Chartrain, Merck & Co., Inc.
- 15 **Metabolic Flux Analysis of CHO Cell Perfusion Culture using 2D-NMR Spectroscopy and ¹³C-Isotopomer Analysis**
Chetan Goudar, Bayer Healthcare
- 16 **Profiling of Glycosylation Genes in CHO Fed-Batch Cultures**
Chee Fung D Wong, Bioprocessing Technology Institute
- 17 **Effect of Doxycycline-Regulated PDI Expression on Specific Productivity of Recombinant CHO Cells: Thrombopoietin and Antibody**
Gyun Min Lee, KAIST
- 18 **Silencing of Bax and Bak Genes with RNA Interference Delayed the Onset of Apoptosis in Cultured CHO Cells**
Chee Fung D Wong, Bioprocessing Technology Institute
- 19 **Towards PCO₂-Optimised Fermentations - Reliable Sampling, PCO₂ Control & Cellular Metabolism**
Heino Büntemeyer, University Of Bielefeld
- 20 **Establishment of Flexible Cell Lines for Protein and Virus Expression by FLP Mediated Site-Specific Integration**
Hansjorg Hauser, German Research Centre For Biotechnology (Gbf)
- 21 **An Oxystat Controlled High Cell Density Perfusion Process for the Production of Human Growth Hormone**
Heino Buentemeyer, University Of Bielefeld
- 22 **Enhancement of Antibody Production by Enrichment of Amino Acids Concentrations of Chinese Hamster Ovary Cell Culture Medium**
Hirofumi Kawai, KIRIN Brewery
- 23 **Maintenance and Banking of Human and Animal Cell Lines in Protein- and Peptide-Free Minimal Culture Media**
Ferruccio Messi, Cell Culture Technologies
- 24 **Antibody Production by the Epicho Transient Expression System**
Giuseppe Codamo, University Of New South Wales
- 25 **Investigations of the Mechanisms of Higher RMAB Transcriptional Rates in MTX-Selected High Producing CHO Cell Lines**
Zhou Jiang, Rensselaer Polytechnic Institute

- 26 **Replacement of Peptone Containing Feed Media with a Chemically Defined Feed Medium Maintains a High Yield Cell Culture Process**
Jeffrey Yant, Amgen, Inc.
- 27 **Controlling a Constant Level of Viable Biomass in a Perfused Cytostat using Radio-Frequency Impedance**
John Poppleton, Applikon Biotechnology
- 28 **Development of a Defined Feed Medium using a Statistical Approach to Optimize Recombinant Protein Expression**
Jeffrey Yant, Amgen, Inc.
- 29 **Strategies for Dissolved CO₂ Control in Mammalian Perfusion Cell Cultures**
Klaus Joeris, Bayer Healthcare
- 30 **Expression of Factor VIII in a Human Cell Line, HKB11**
John Murphy, Bayer Healthcare
- 31 **Development of a New Probe for In-Situ Oxygen Uptake Rate (Our) Measurement in Mammalian Cell Culture Processes**
Klaus Joeris, Bayer Healthcare
- 32 **Overexpression of Molecular Chaperones in CHO Cells for Improved Culture Viability**
Yih Yean Lee, Bioprocessing Technology Institute
- 33 **Does Telomerase Over-Expression Enhance Chromosomal Stability and Possibly Production Stability?**
Mohamed Al-Rubeai, University College Dublin
- 34 **Use of Hydrocyclones for the Retention of Recombinant CHO Cells Producing GM-CSF**
Ricardo Medronho, Federal University Of Rio De Janeiro
- 35 **Rapid Protein Profiling and Biomarker Identification in Mammalian Cell Culture using SELDI-TOF-Based Approach**
Mohamed Al-Rubeai, University College Dublin
- 36 **A Generic Approach for Optimizing Productivity in Animal Cell Culture**
Jianying Gao, Sanofi Pasteur Limited
- 37 **Air-Controlled Proliferation via P27KIP1 Expression Leads to Enhanced Specific and Volumetric Productivity of Hek.Ebna Cells**
Nicola Susann Werner, Novartis Institutes For BioMedical Research
- 38 **Suitable Chromosomal Location for Dihydrofolate Reductase Gene Amplification in Chinese Hamster Ovary Cell**
Takeshi Omasa, Osaka University

- 39 **Optimization of Multiple Steps for Significant Acceleration in Cell Line Development**
Rohini Deshpande, Amgen, Inc.
- 40 **Generating High Producing Antibody Cell Lines in an Accelerated Development Timeline**
Robin Heller-Harrison, Wyeth Biotech
- 41 **Streamlining Cell Line Development: Improvements in Selection and Screening**
Rohini Deshpande, Amgen, Inc.
- 42 **Monitoring Energy Metabolism: The Challenge of Intracellular Metabolite Analysis of Mammalian Cells in Culture**
Joachim Ritter, Max Planck Institute For Dynamics Of Complex Technical Systems
- 43 **Modular Membrane Adsorber Based System for Protein Purification**
Thomas Scheper, University Of Hannover
- 44 **Characterization and Understanding of Cell Physiology during GS-CHO Process Development**
Xuejun Gu, Eli Lilly & Company
- 45 **New Application for In-Situ Microscopy: In-Line Monitoring of Microcarrier Cultivation in Combination with Image Processing Algorithms using a Neural Network**
Thomas Scheper, University Of Hannover
- 46 **BI HEX - Platform for Fast Track Generation of High Producer Cell Lines Leading to High-Titer Processes for Production of Therapeutic Proteins from Mammalian Cells**
Stefanos Grammatikos, Boehringer Ingelheim Pharma GmbH & Co. KG
- 47 **Statistical Design of Experiments to Probe Media Component Effects in a MAB-Producing CHO Line: Towards Tunable Productivity and Product Quality**
Sumitra Angepat, Abbott Bioresearch Center
- 48 **Combined Effects of Glucose and CO₂ Concentrations on CHO Cell Physiology and Antibody Production**
Shinya Takuma, Chugai Pharmaceutical Co., Ltd.
- 49 **Rapid and High Efficiency Gene Knockout and Targeted Gene Integration in Production Cell Lines using Zinc Finger Nuclease Technology**
Trevor Collingwood, Enabling Technology
- 50 **Specificity of MAB Production Enhancing Compounds in Hybridoma Cell Culture**
Tiffany Rau, Vanderbilt University

- 51 **Co-Expression of the Anti-Apoptotic Genes Aven and E1B-19K Improves BHK Cell Performance in Batch and Continuous Perfusion Cultures**
Toey Nivitchanyong, Johns Hopkins University
- 52 **Study of the Effect of Enzyme and Amino Acid Transport Perturbations for Mammalian Cells in Culture via a Mathematical Model**
Ziomara P Gerdtzen, University Of Chile
- 53 **Effect of Variable Glucose and Glutamine Concentrations on Lactate and Ammonia Production at Semi-Steady Phases of CHO Cell Cultures**
Zhengjian Li, Bristol-Myers Squibb Company
- 54 **Qualitative and Quantative Protein Profiling by Multivariate Analysis of Lcms Signals**
François-Thomas Michaud, Universite Laval
- 55 **Proteomic Characterization of Recombinant Monoclonal Antibody Expression in Ns0 Myeloma Cell Line**
Adolfo Castillo Vitloch, Center Of Molecular Immunology
- 56 **Generation of Manufacturing Cell Line Phenotypes by Whole Genome Evolution**
Florance Wu, Invitrogen Corporation
- 57 **Phenotypic Drift: An Inherent Feature of Cell Culture**
Louise Barnes, University Of Manchester
- 58 **CHO-Clone AF Cloning Medium Supports Electroporation and Recovery in Cell Line Generation**
Nan Lin, SAFC Biosciences
- 59 **Use of Transcriptome Analysis to Identify Factors that Define Clonal Productivity in Recombinant Mammalian Cell Lines**
Louise Barnes, University Of Manchester
- 60 **Proteomic Analysis of CHO Cells During Recombinant Protein Production in High-Density Culture**
Nan Lin, SAFC Biosciences
- 61 **The Engineering of Cell Lines Using Bio-Informatics Tools: Focus on Adhesion in Hela Cells**
Pratik Jaluria, National Institutes Of Health/NIDDK
- 62 **Proteomic Analysis of GS-NS0 Cells Producing a Recombinant Monoclonal Antibody During Fed-Batch Culture**
Scott Stansfield, University Of Queensland
- 63 **Genome-Wide Analysis of the Transcriptional Response of Murine Hybridomas to Osmotic Shock**
Susan Sharfstein, Rensselaer Polytechnic Institute

- 64 **Chinese Hamster Ovary Proteome - Development and Cross Species Comparative Analysis**
Joon Chong Yee, University Of Minnesota
- 65 **Characterization of Yield and Glycosylation of a Recombinant Glycoprotein Produced in Suspension and Microcarrier Culture**
Susan Sharfstein, Rensselaer Polytechnic Institute
- 66 **Comparative EST Sequence Analysis Between BHK (Baby Hamster Kidney) and CHO (Chinese Hamster Ovary) Cells**
Joon Chong Yee, University Of Minnesota
- 67 **Exploring Growth Properties of Mammalian Cells with Bio-Informatics Tools**
Joseph Shiloach, National Institutes Of Health/NIDDK
- 68 **Rate-Limiting Steps in Large-Scale Cell Culture Processes for the Manufacture of Therapeutic Antibody Fusion Proteins: Case Studies**
Bernhard Schilling, Bristol-Myers Squibb Company
- 69 **Extending the Utility of Cell Culture Models with a Focus on Hydrodynamic Sensitivity Challenges**
Theodore J. Deloggio, BioProcess Consultants
- 70 **Development of an Airlift Bioreactor Assay to Measure Specific Productivity of Stable Cell Lines**
Ben Pelletier, Genentech, Inc.
- 71 **Rapid Production of Antibodies by Pooled Transfectants**
Catherine Brown, Lonza Biologics PLC
- 72 **NS0 Cell Line Growth and Scale-Up using Wave Bag Bioreactors**
Charlotte Lukas, Human Genome Sciences, Inc.
- 73 **Process Scale-Up and Transfer of Long-Term, Microcarrier-Based, Perfusion Processes: Strategy and Examples**
Claudia Buser, Genzyme Corporation
- 74 **Fed-Batch Production of Recombinant Antibody by Recombinant CHO Cells: Development of Serum-Free Medium, Optimization of Process Parameters, and Application of Effective Feeding Strategy**
Duk-Jae Oh, Sejong University
- 75 **Flow Cytometry Applications for Process Development in Cell Culture**
Donna Forsht, Human Genome Sciences, Inc.
- 76 **Rapid Generation of PER.C6® Cell Lines in Serum Free Medium**
Gerben Zijlstra, DSM Biologics
- 77 **Predictive Scaling of Cell Culture Aeration in Large-Scale Bioreactors**
Gregg Nyberg, Amgen, Inc.

- 78 **Influences of Cell Retention Device Temperature Fluctuations on Chinese Hamster Ovary Cells and Defining Acceptable Ranges for Acoustic Separator Operation**
Hans Drouin, University Of British Columbia
- 79 **Scale-Up Considerations Illustrated by a Microalgae Model**
Weiwei Hu, The Ohio State University
- 80 **Qualification of Scale-Down Models for CHO-Based Recombinant Protein Production**
Ilse Blumentals, GlaxoSmithKline, Biopharm CEDD
- 81 **Scale up of Cell Culture Processes using CFD and a Down Scaled (Two Compartment) Bioreactor Model**
Jan Visser, Diosynth Biotechnology
- 82 **Integrated Platform for Continuous Production & Isolation of Protein Drug Candidates**
Jens Vogel, Bayer Healthcare
- 83 **The Design and Application of Robustness Studies for the Definition of Long-Term Microcarrier-Based Perfusion Cell Culture Processes**
Kenneth Karey, Genzyme Corporation
- 84 **Protein Precipitation During Large-Scale Ultrafiltration of Perfusion Culture Supernatant: Induction by Pluronic F-68 and Prevention Through a New Process Scheme**
Jens Vogel, Bayer Healthcare
- 85 **Development of a Generic Platform Process for Cell Lines Expressing Glutamine Synthetase (GS) and Human Antibodies**
Jonathan Dempsey, Cambridge Antibody Technology
- 86 **Refinement of a Platform Cell Line Development Process for High-Titer, ASM-Free MAB Production in CHO Cells**
Leigh Francisco, Seattle Genetics, Inc.
- 87 **Tubespins® System a Powerful High Throughput Mammalian Cell Culture System for the Development of High-Yield GMP Manufacturing Processes**
Maria De Jesus, ExcellGene SA
- 88 **Running 500 Cultures in Parallel: Multi-Parameter Media Compound Screening using a Novel 50-ML Tubespins® Bioreactor for Suspension Cultures of Mammalian Cells**
Matthieu Stettler, Ecole Polytechnique Fédérale De Lausanne
- 89 **A Simple, Semi-Empirical Mathematical Model useful for Relating PH Control Parameters in a Bicarbonate-Buffered NS0 Cell Culture Process**
Michael Gramer, PDL BioPharma, Inc.

- 90 **Role of Carbon Dioxide in Defining a Small-Scale Bioreactor Model for a Commercial Perfusion Cell Culture Process**
Madhavaram A. Paranandi, Global Biologics Supply Chain, Llc
- 91 **High-Throughput Automated Screening of Media Components for Cell Culture**
Nigel Jenkins, Serono SA
- 92 **High-Throughput Cell Culture Process Development**
Oscar Lara-Velasco, GlaxoSmithKline, Biopharm CEDD
- 93 **Bioreactor Satellite Culture Experiments in the Start-Up of a Cell Culture Troubleshooting Lab**
Patrick Salou, Novartis Pharma S.A.S.
- 94 **High-Throughput Cell Culture in Well Plates: Advantages, Data Analysis, and Future Needs**
R. Robert Balcarcel, Vanderbilt University
- 95 **Without Viral Touch: Transient Insect Cell Expression on Small and Large Scale**
Sabine Geisse, Novartis Institutes For Biomedical Research
- 96 **Application of Computational Fluid Dynamics for Cell Culture Scale Up and Scale Down**
Sanjeev Ahuja, Biogen Idec Inc
- 97 **Cell Culture Medium Optimization for Upstream and Scaleup Processes**
Scott J. Jacobia, Gibco Cell Culture, Invitrogen Corporation
- 98 **Understanding and Eliminating Potential Sensitivity of a GS-NS0 Fed-Batch Process to Cell Growth**
Serena Fries, Merck & Co., Inc.
- 99 **Heterogeneous Conditions in PH and Dissolved CO₂ Concentration on Hybridoma Cultures: Implications on Growth and Monoclonal Antibody Glycosylation**
Antonio Serrato, National Autonomous University Of Mexico
- 100 **Scale-Down Perfusion Process for Recombinant Protein Expression**
Stephen Gorfien, Invitrogen Corporation
- 101 **Improvement of a CHO Fed-Batch Process by Fortifying with Plant Peptones**
Yun Jiang, Biovitrum AB
- 102 **Sodium Butyrate Impacts the Expression of Genes Associated with Erythropoietin Glycosylation**
Frank Olsen, Amgen, Inc.

- 103 **Modeling and Visualizing N-Glycan Processing in Mammalian Cells**
Patrick Hossler, University Of Minnesota
- 104 **Effects of Culture Conditions on Cell Culture Performance and Product Quality of a Glycoprotein Produced in a Recombinant CHO Cell Line**
Jose Gomes, Wyeth BioPharma
- 105 **The Heterogeneity of Glycosylation of Human Recombinant Beta-Interferon Produced from a Transfected CHO Cell Line is Insensitive to Culture Perturbations**
Maureen Spearman, University Of Manitoba
- 106 **A Change from Perfusion to Fed-Batch Technology can be Performed without Altering Recombinant Protein Quality**
Urs Weber, Laboratoires Serono S.A.
- 107 **Improving Process Understanding for Legacy Cell Culture Processes**
Arlis Corbett, Genentech, Inc.
- 108 **Production Process Scale-Up and Technology Transfer of a CGMP Process to a Contract Manufacturing Organization, A Case Study**
Amir Hakakha, Ortec International, Inc.
- 109 **Feed Media Development and High Cell Density Key to Titer Improvement**
Anish Sudra, Seattle Genetics, Inc.
- 110 **Strategies to Enhance the Operability and Robustness of Generic GS-CHO Fermentation Processes for Scale-Up to CGMP Manufacturing**
Atul Mohindra, Lonza Biologics PLC
- 111 **The use of a Platform Process for Phase I/II Clinical Process Development – A Case Study of Four Molecules**
Lily Chu, Genentech, Inc.
- 112 **Biogen Idec's Integrated Cell Culture Process Development and Technology Transfer**
David Y. H. Chang, Biogen Idec Inc
- 113 **Microcytometry and Spent Medium Analysis as Tools for Cell Culture Process Development**
Itzcoatl Pla, Abbott Bioresearch Center
- 114 **Evaluation of Cell Growth, Metabolism and IGG1 Production in a Wave Bioreactor and a Stirred Tank Reactor: Effects of PH, Dissolved Oxygen and Osmolality in Batch Culture**
Jean-Francois Hamel, M.I.T.

- 115 **Scale-Up and Comparability Assessment of Humira Cell Culture Process from 3000 L to 12000 L Scales**
John Fann, Abbott Bioresearch Center
- 116 **Rapid Enhancement of Antibody Production Through DOE-Based Hydrolysate Supplementation of an Optimized Base Medium**
Kathie Fritchman, BD Diagnostic Systems
- 117 **Process Characterization for CHO-Based Recombinant Protein Production**
Kathy Duran, GlaxoSmithKline, Biopharm CEDD
- 118 **Strategy for a Seamless Technology Transfer of a Cell Culture Process to a Large-Scale Manufacturing Facility (A Process Recipient's Perspective)**
Kate Bishop, Genentech, Inc.
- 119 **Development of a GS-CHO Cell Fed-Batch Culture Process for Production of Recombinant Human Antithrombin**
Shinobu Kuwae, Mitsubishi Pharma
- 120 **Time Saving Strategies and Risk Mitigation in Cell Culture Process Characterization and Validation: A Case Study**
Minh Luu, Genentech, Inc.
- 121 **From cDNA to 1 g/L in 6 Months: Efficient Generation of CHO Cell Clones and Rapid Process Development for XmAb™ 2513 Production**
Marie M. Zhu, Xencor, Inc.
- 122 **Development of FED-Batch Cell Culture Process for the Manufacture of Recombinant Human Thrombin**
Gautam Nayar, Zymogenetics, Inc.,
- 123 **From Tech Transfer to Tech Transfer: Cell Culture Process Modification and Their Impact on Product Quality**
Nilesh Shah, Seattle Genetics, Inc.
- 124 **Use of Platform Inoculum Expansion to Simplify Technology Transfer**
Paul Chen, Biogen Idec Inc
- 125 **Upstream Culture Development and Contrasts for Internal and External Technology Transfer: Case Study for a Phase I/II Monoclonal Antibody Production Process**
T. Craig Seamans, Merck & Co., Inc.
- 126 **Condensing a Cell Line Development Timeline Through Parallel Sub-Cloning and Media Adaptation Process Development Activities - A Case Study**
Scott Storms, Irvine Scientific
- 127 **Enhanced Production of Recombinant Proteins by High Density Cell Entrapment in Microcarriers**
Tharmala Tharmalingam, University Of Manitoba

- 128 **Cell Density and Physiological State Monitoring by Dielectric Spectroscopy**
Geoffrey Esteban, Fogale
- 129 **Monitoring Nutrient Limitations by Online Capacitance Measurements in Batch and FED-Batch Cell Culture Fermentations**
Georg Schmid, F. Hoffmann-La Roche AG
- 130 **Transplantation of Bioreactor-Expanded Human Neural Precursor Cells in an Animal Model of Huntington's Disease**
Arindom Sen, University Of Calgary
- 131 **A Gene Expression Signature for the Screening of Maintenance and Differentiating Culture Conditions for Mouse Embryonic Stem Cells**
Clive Glover, Michael Smith Laboratories - UBC
- 132 **Temporal Exposure of BMP Family Members Influences Mouse ESC to Cardiomyocyte Differentiation Efficiency in Vitro**
Chris Lannon, StemCell Technologies, Inc.
- 133 **The Effect of Microwell Size and Inoculation Density on the Automated Processing of Stem Cells**
Farlan Veraitch, University College London
- 134 **Expansion and Neural Differentiation of Mouse Embryonic Stem Cells**
Joaquim Cabral, Instituto Superior Tecnico (IST)
- 135 **CO-Culture of ES Cell Derived Cardiomyocyte and Endothelial Cells on Biodegradable Polyurethane Scaffolds**
Kimberly Woodhouse, University Of Toronto
- 136 **Application of a Hollow-Fiber Membrane Stirring System for Oxygenation**
Cornelia Kasper, Institut Fur Technische Chemie Uni Hannover
- 137 **Nicotinamide increases the Productivity of EX Vivo Megakaryocytic Cultures**
Lisa Giammona, Northwestern University
- 138 **Application of a New Rotating Bed Bioreactor System for Cultivating 3D Bone Constructs**
Cornelia Kasper, Institut Fur Technische Chemie Uni Hannover
- 139 **Increased Numbers of Secreted Proteins in Conditioned Media from Mouse Primary Embryonic Fibroblasts Identified using Solid Phase Extraction of Glycopeptides Prior to Proteomic Analysis**
Mario Jardon, Michael Smith Laboratories - UBC
- 140 **A Perfusion Bioreactor for Expansion and Differentiation of Embryonic Stem Cells**
Anli Ouyang, Ohio State University

- 141 **Isolation, Purification and Expansion of Nucleus Pulposus Cells for Tissue Engineering Solutions to Lower Back Pain**
Michael Kallos, University Of Calgary
- 142 **Modeling and Scale Up a Fibrous Bed Bioreactor for Mammalian Cell Culture**
Anli Ouyang, Ohio State University
- 143 **Optimized Expansion, Differentiation and Scaled-Up Production of Pancreatic Islet-Like Cell Clusters from Human Adult Pancreatic Progenitors**
Marta Szabat, UBC/Michael Smith Laboratories
- 144 **Exploring Global Transcriptional Responses to EX Vivo Megakaryocyte Culture Conditions**
Peter Fuhrken, Northwestern University
- 145 **Generation of Functional Hepatic Cells for Bio-Artificial Liver and Immediate Expansion of the Cells**
Yumi Narita, University Of Fukui
- 146 **Engineering of Viral Vectors for Efficient Transduction of Islet Cells**
Amelie Pilotte, Biotechnology Research Institute
- 147 **Modeling Rotavirus VLPS Production: Infection, Gene Expression and Vips Assembly**
Antonio Roldao, IBET/ITQB
- 148 **Highly Efficient Purification of HSV-1 Gene Vector on IMAC: Oxidative Damage by Hydroxyl Free Radicals and its Prevention**
Mohammad M. Ataai, University Of Pittsburgh
- 149 **Optimization of a GMP Manufacturing Process Utilizing MRC-5 Cells for Production of a Venezuelan Equine Encephalitis Vaccine**
Bradley Grimm, Molecular Medicine BioServices, Inc
- 150 **A Novel System for Enhanced Baculovirus Mediated Transient Transgene Expression in CHO Cells**
Cynthia Elias, NRC - Biotechnology Research Institute
- 151 **Quantification and Characterization of Rotavirus-Like Particles by Gel Permeation Chromatography**
Jimmy Mena, UNAM
- 152 **Asynchronous Behaviour in Synchronously Infected Insect Cell Culture**
Lars Nielsen, The University Of Queensland
- 153 **Development of Serum-Free Medium Formulations for CHO Cells**
Leda Castilho, Federal University Of Rio De Janeiro

- 154 **Production of Adenovirus Vectors Under Controlled Low Glutamine Fed-Batch Cultures of PER.C6™ Cells**
Luis Maranga, Merck & Co., Inc.
- 155 **Production of Yellow Fever Virus in High-Density Vero Cell Cultures**
Leda Castilho, Federal University Of Rio De Janeiro
- 156 **Economic Adenovirus Vectors Production for use as a Veterinary Vaccine**
Paula M. Alves, IBET/ITQB
- 157 **Development and Optimization of a Procedure for the Production of Parapoxvirus Ovis**
Michael Pohlscheidt, Roche Diagnostics GmbH, Penzberg
- 158 **Development of New Cell Lines for Fast, Reproducible and Efficient Production of Retroviral Gene Therapy Vectors**
Manuel Carrondo, Instituto De Biologia
- 159 **Optimization of Adenovirus Production in Perfusion Cultures by Assessment of the Cells Physiological State**
Olivier Henry, NRC - Biotechnology Research Institute
- 160 **Synergistic Enhancement of Retroviral Transduction Rates with Acoustic Standing Wave Fields and Cell Lysate**
Pascal Beauchesne, University Of British Columbia
- 161 **Influence of Intron and Exon Splicing Enhancers on Mammalian Cell Expression of a Truncated Spike Protein of SARS-COV and its Implication for Subunit Vaccine Development**
Suh-Chin Wu, National Tsing Hua University
- 162 **Beta-Propiolactone: A Potent Killer of Residual Nucleic Acids in Vaccine Manufacturing Processes**
Ulf Grunwald, Chrion Vaccines
- 163 **A Comparison of Virus Propagation, Inactivation, and Immunogenicity of Three Enterovirus-71 Strains Produced in Serum-Free Microcarrier Vero Cell Culture**
Suh-Chin Wu, National Tsing Hua University
- 164 **Modeling Retroviral Vector Transduction of Mammalian Cells: Quantification of Titer and Intracellular Half-Life of Retroviral Vectors**
Venkata Tayi, The University Of British Columbia
- 165 **New High Performance Disposable Bioreactor**
Vijay Singh, Wave Biotech
- 166 **Technology Transfer Case Study: Changes in Process Performance During Scale-Up Due to Differences in Trace Element Concentration**
Barbara Woppmann, Biogen Idec Inc

- 167 **Computer-Based Matrix to Evaluate Superior Medium Delivery Format for Biopharmaceutical Production**
David Jayme, Brigham Young Univeresity - Hawaii
- 168 **Development of Animal Component-Free Medium for Virus Production**
Zhaohui Geng, SAFC Biosciences
- 169 **Development of a Cryopreservation Method for a Hepatoma Cell Line to Enable Bulk Preparation of Ready to Assay Cells in a Multiwell Plate Format**
Elke Lullau, AstraZeneca Biotech Laboratory
- 170 **Novel Serum-Free Cryopreservative Solution using Silk Protein Sericin**
Satoshi Terada, University Of Fukui
- 171 **High Cell Mass Cell Banks and Related Methods for Cryopreservation**
Thomas Seewoester, Amgen, Inc.
- 172 **Expression And Purification Of Human Interleuhin-7 In Insect Cells Using Baculovirus Expression System**
Maryam Mirzaei, McGill University
