About Gyeongju

Gyeongju is Korea's ancient cultural city, the capital of the once great Silla Kingdom (BC 57~AD 935). It is located approximately 350 km southeast of Seoul. When the Silla Kingdom reached the peak of its development, Gyeongju was estimated to have one million residents – four times its current size. UNESCO designated it both as one of ten World Heritage sites in Korea and as one of the world's ten most important ancient cultural cities, both for its position in the historical and cultural development of East Asia and for its role in the formation of the Korean nation. Because of the vast number of archeological sites and cultural properties that remain in this city, Gyeongju is often referred to as "the museum without walls". It is the main destination in South Korea for visitors interested in the cultural heritage of Silla and the architecture of the Joseon Dynasty.
